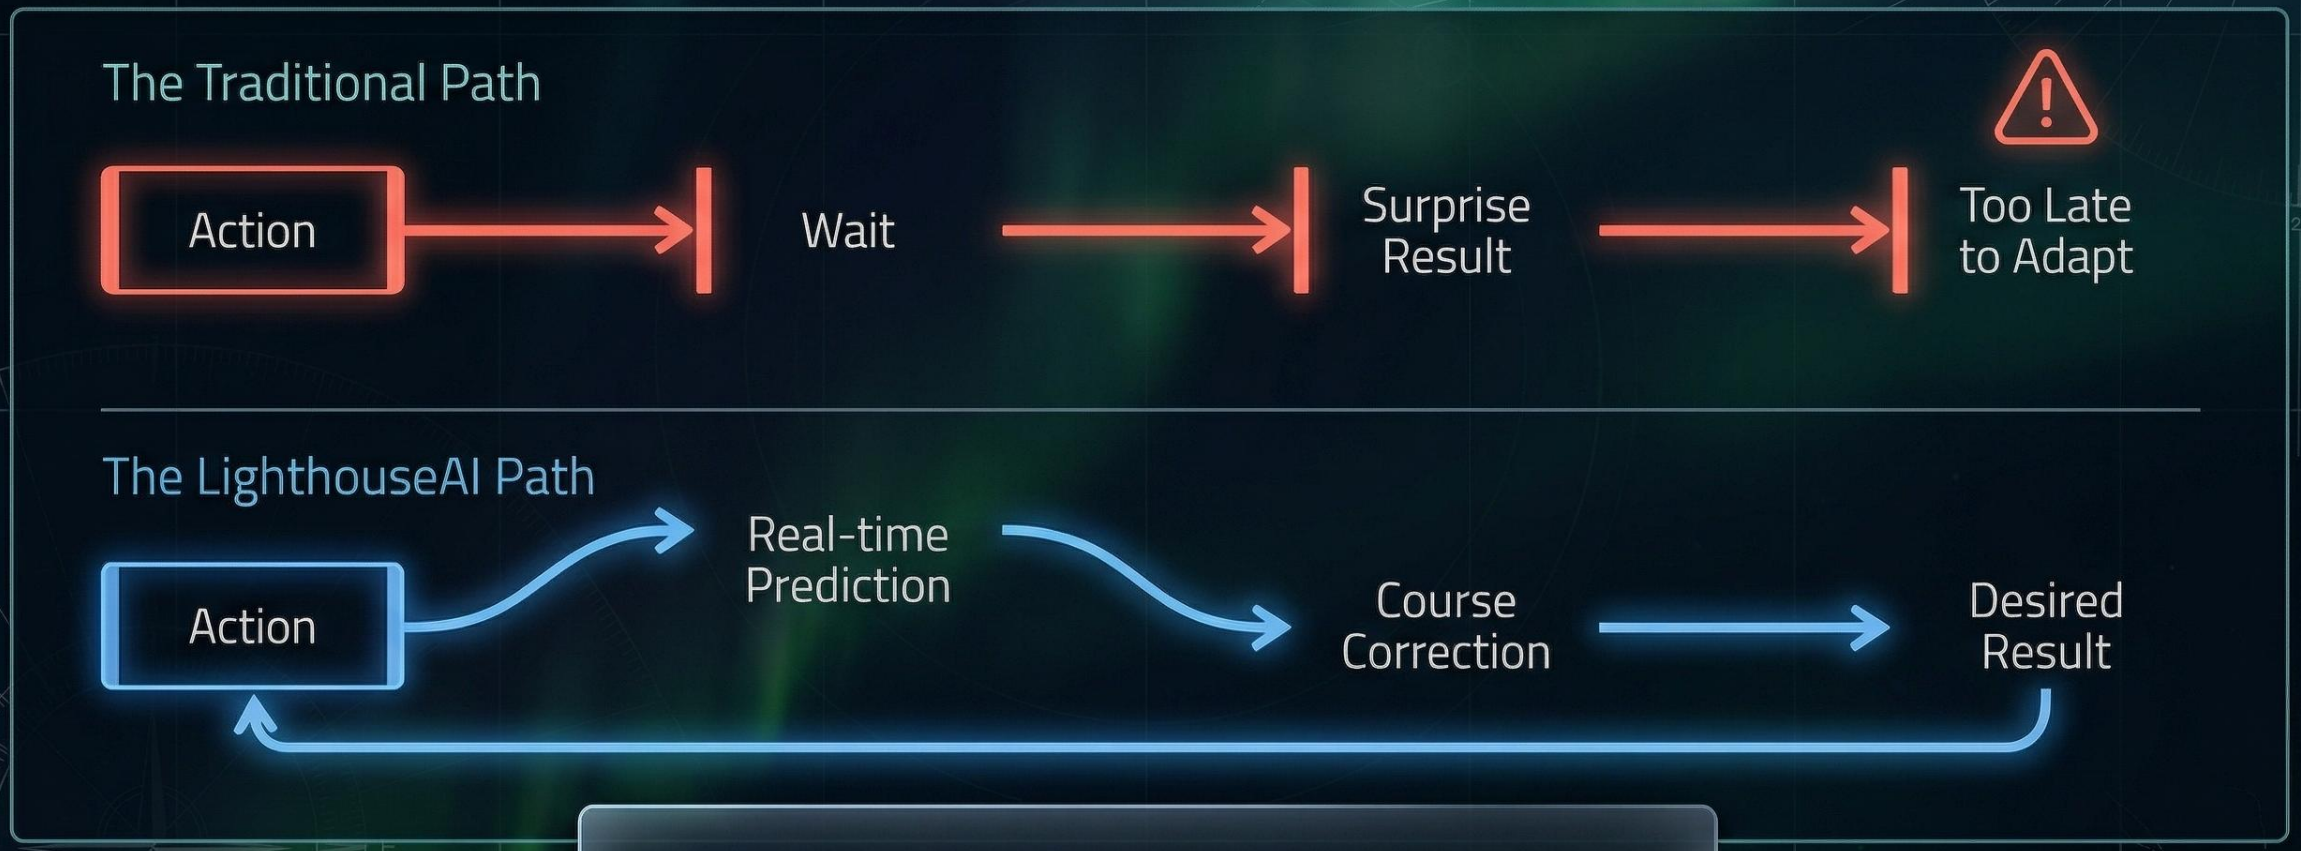
LighthouseAI
Illuminate Your Path to Mastery
An AI-powered academic performance engine.

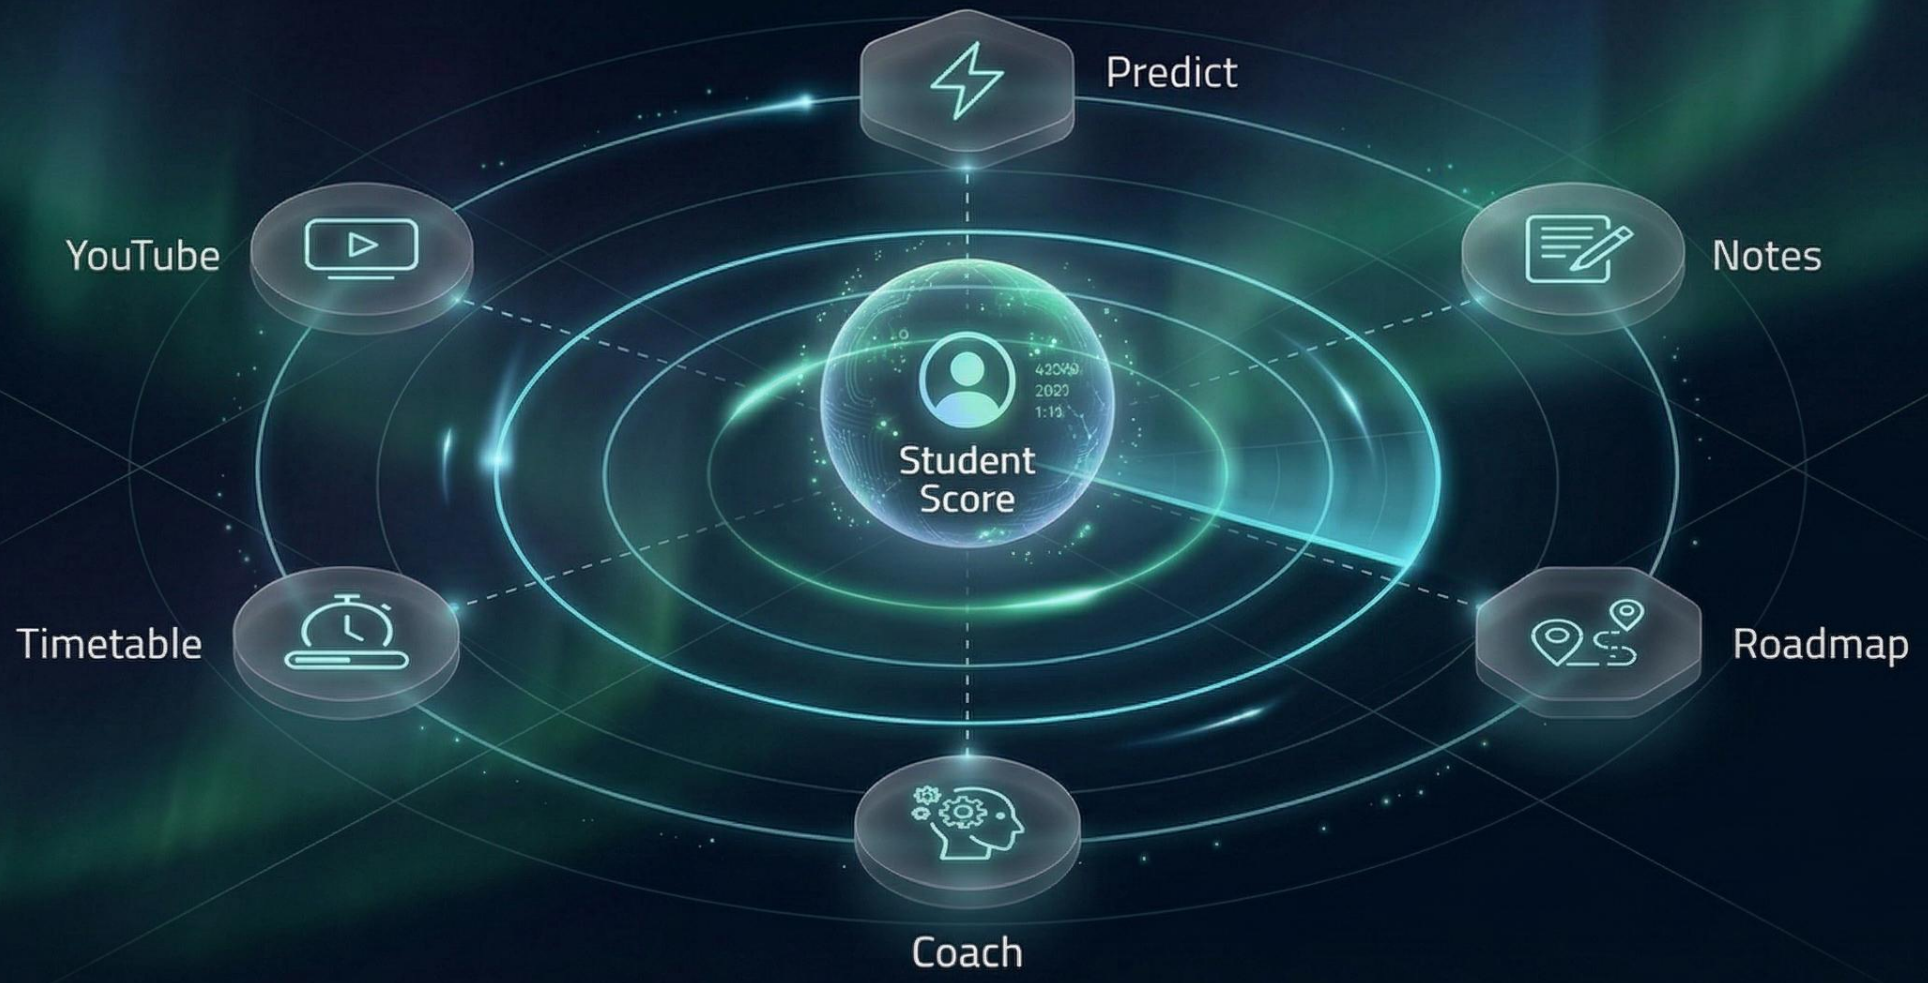
The Academic Blind Spot: Reactive vs. Proactive Learning



Students currently have **zero visibility into their final performance until the results are declared.**

A Complete AI-Powered Study Ecosystem

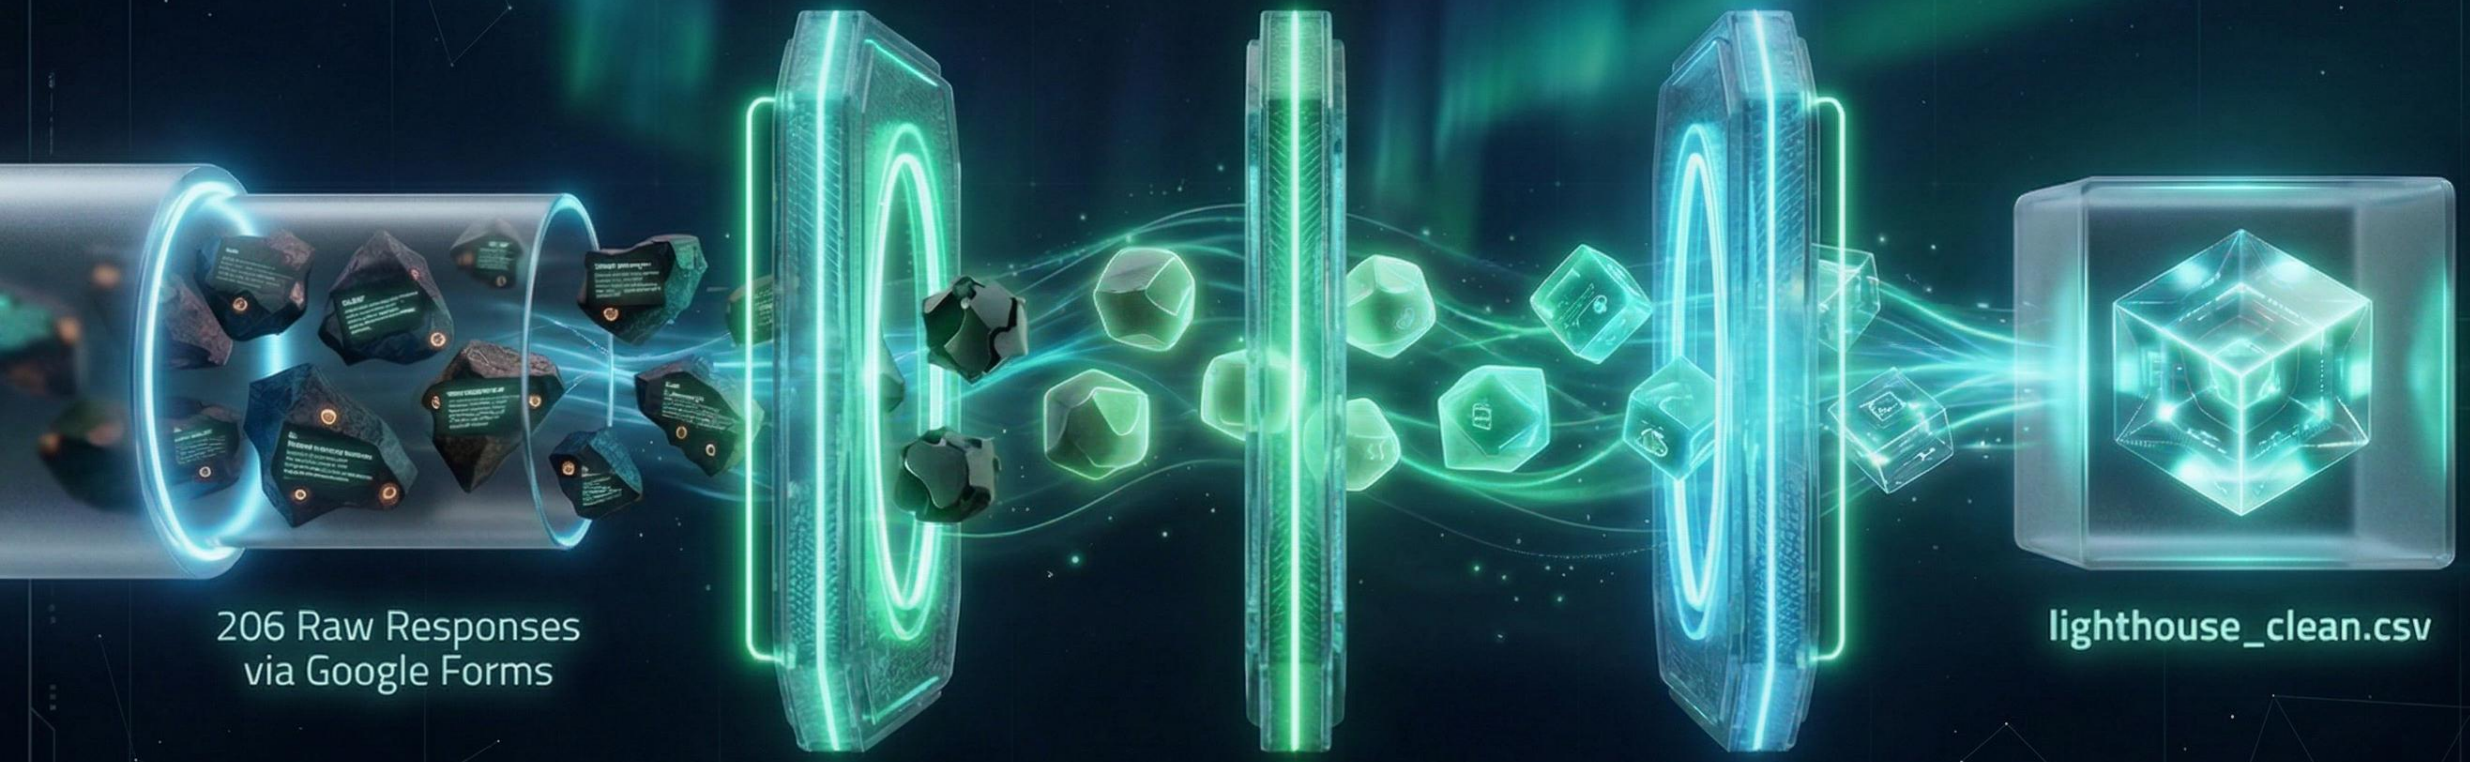
Prediction is just the starting point. LighthouseAI surrounds the student with an interconnected arsenal of 6 tailored intervention tools to actively alter their predicted trajectory.



PRECISION THROUGH MACHINE LEARNING

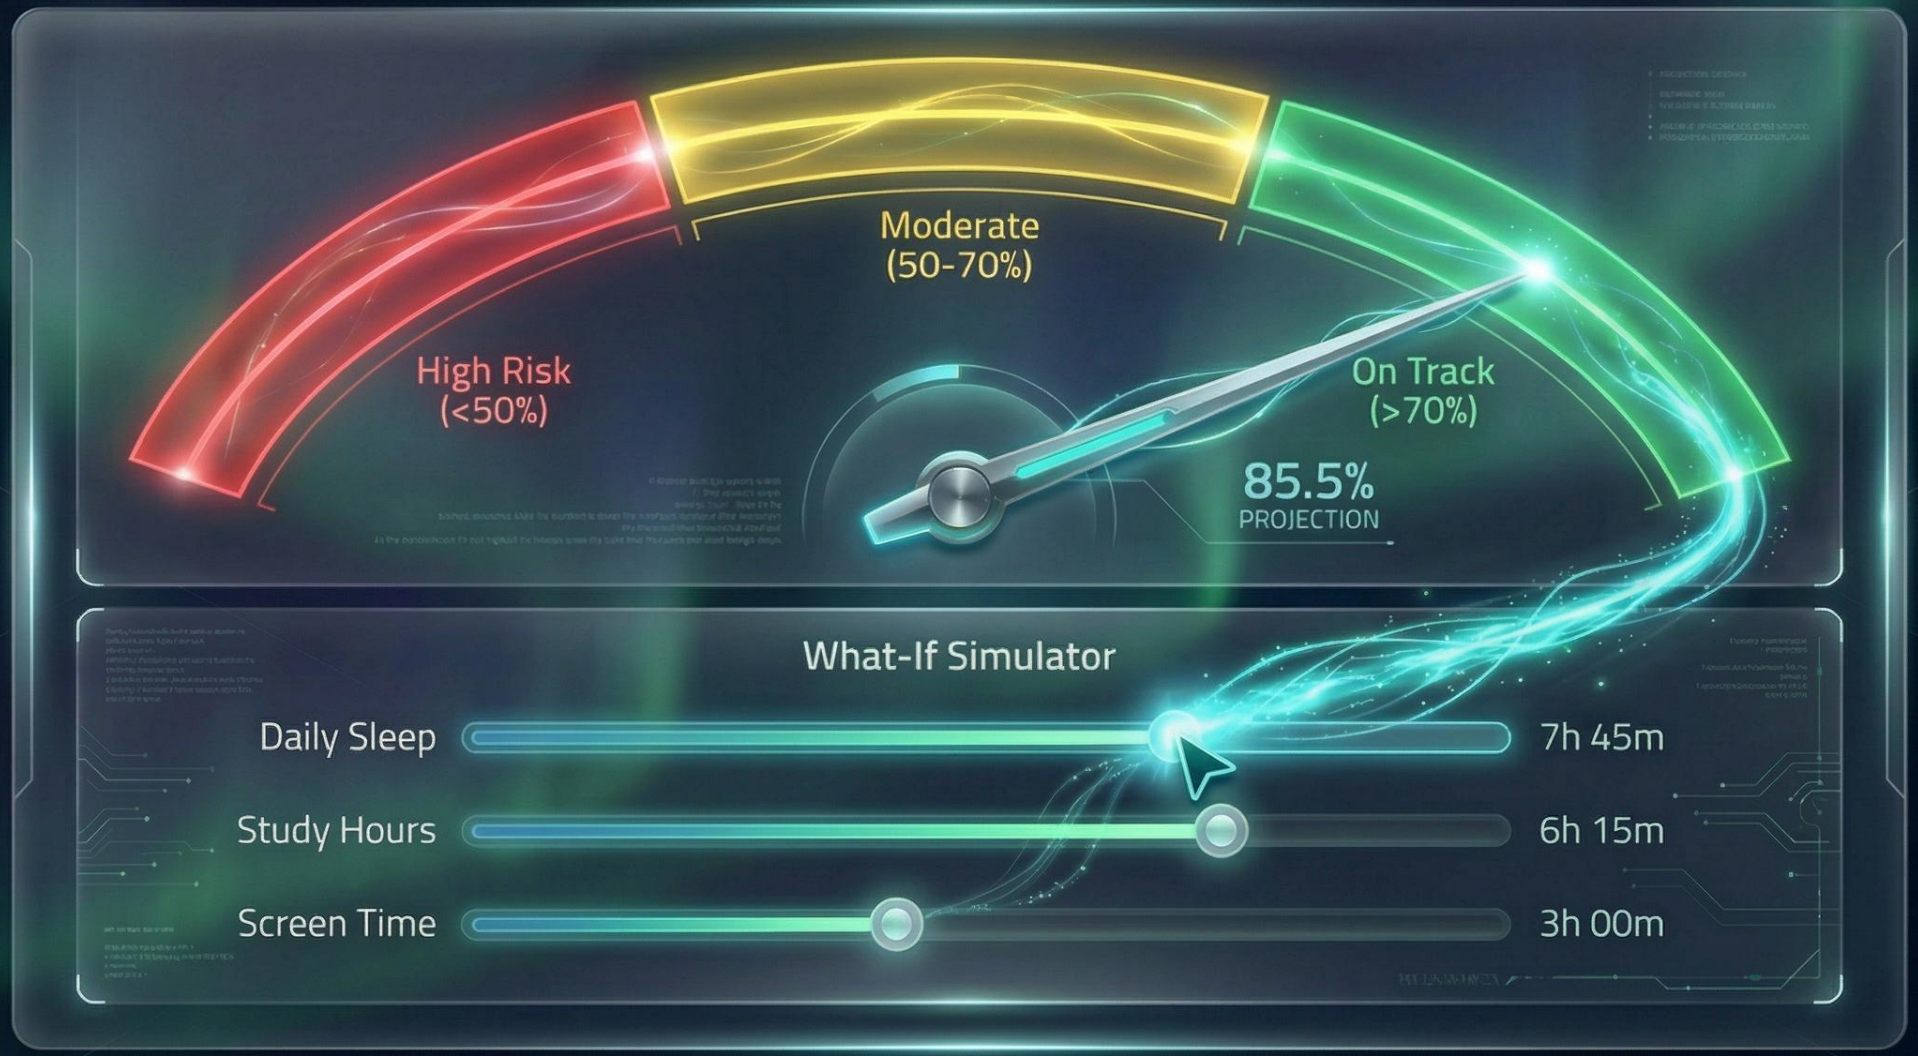
TRAINED ON REALITY, NOT THEORY

The predictive power of LighthouseAI comes from its hyper-local relevance. Built entirely on the actual academic and lifestyle patterns of SKIT College students. It understands the specific commute times, study habits, and academic pressures of the exact user base it serves.



Reveal and Simulate The Future

Live Habit-Variable Simulation: Students don't just see their fate; they interact with it. Adjusting sleep or cutting Netflix hours instantly recalculates the projected score, providing actionable mathematical proof that changing habits changes outcomes.



Compressing Information Based on Urgency

High Urgency

Low Urgency

1 Hour Left

Emergency Cheatsheet.

1 Night Before

Important Questions with Answers.

2–3 Days Left

Structured Bullet Point Summary.

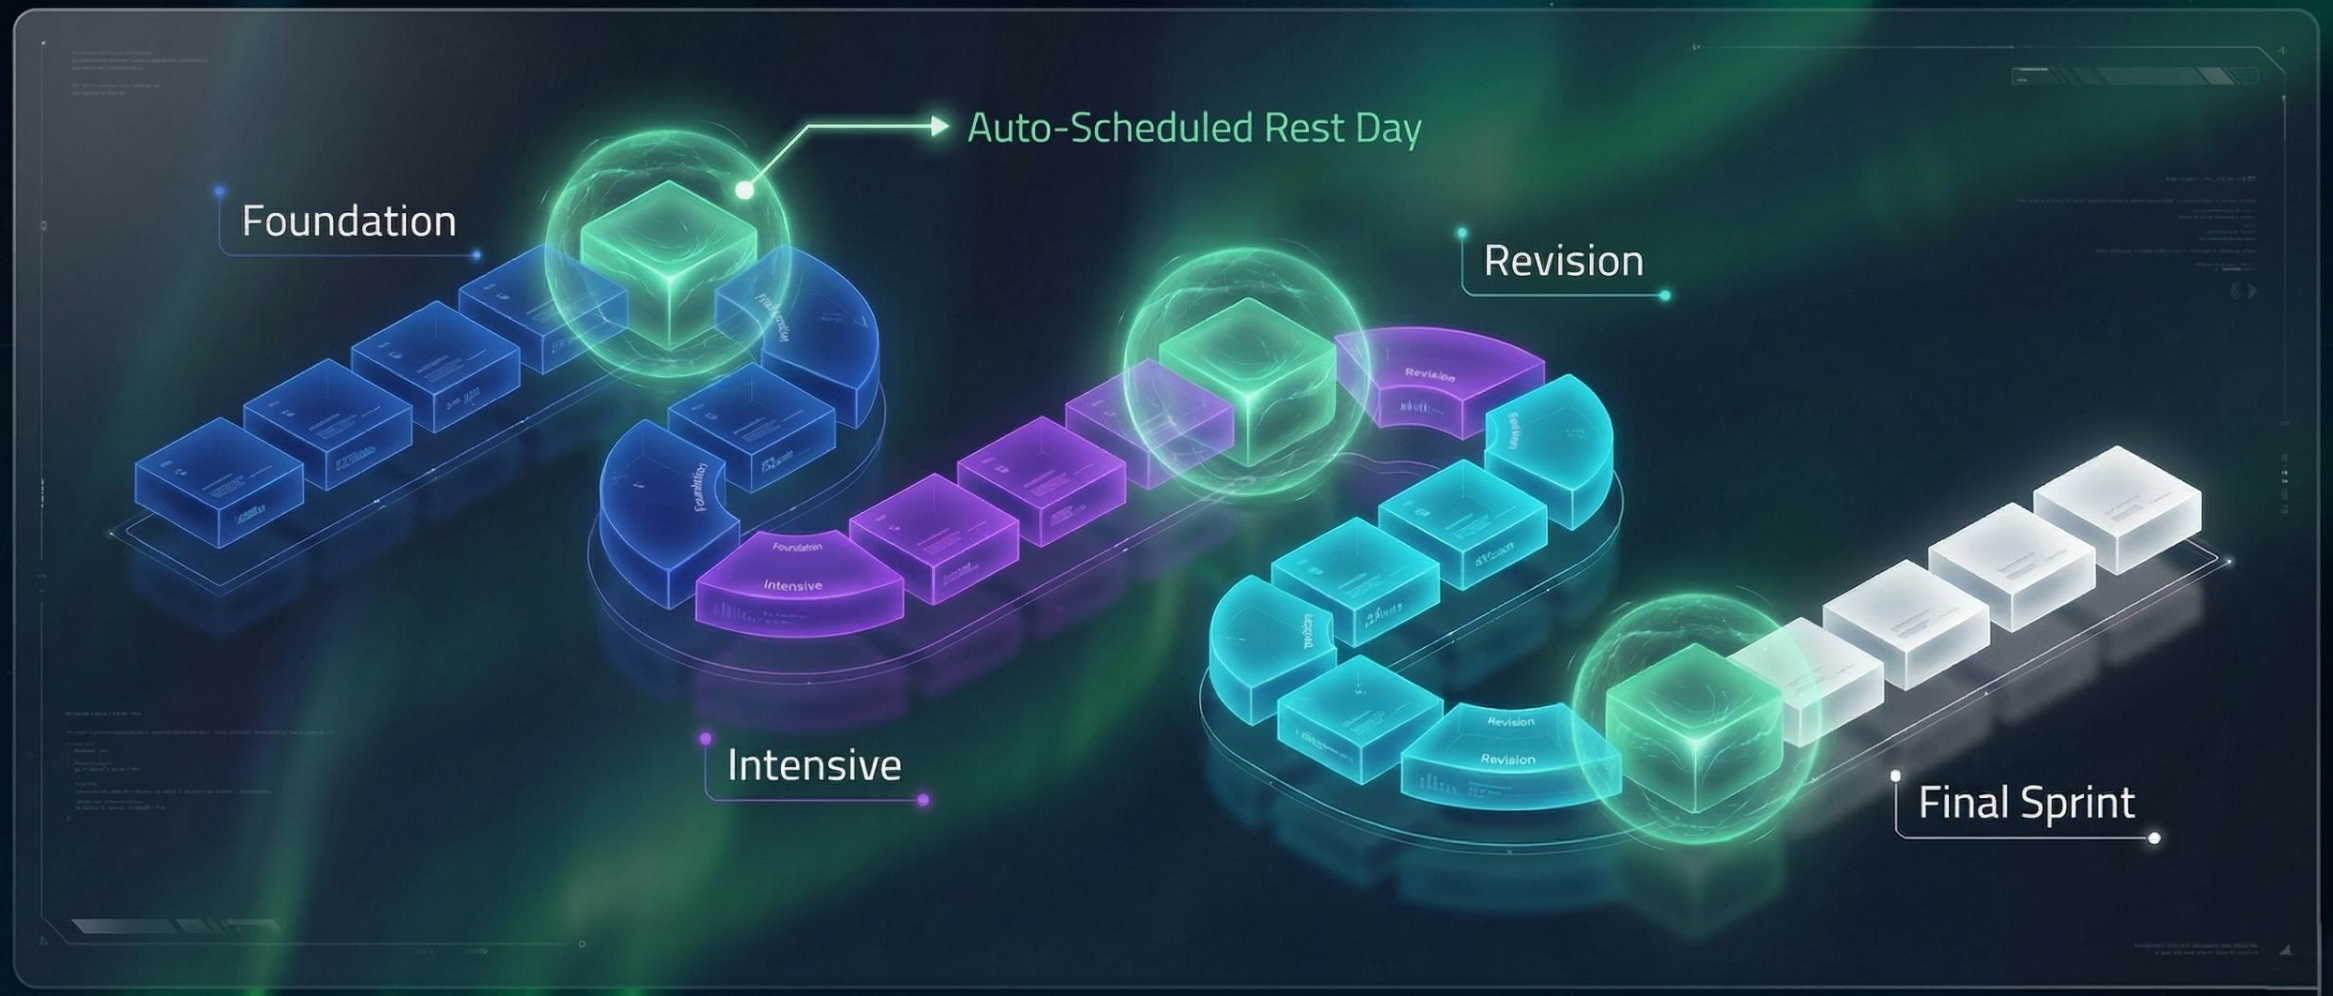
1 Week Left

Flashcard Deck for Spaced Repetition.

OCR Enabled via Gemini AI processing.

Mapping the Victory

Students input their exam date, subjects, and daily availability. Gemini AI instantly generates a complete, day-by-day strategic study plan. Tasks and time allocations are intelligently distributed across four phases to prevent burnout and maximize retention.



Daily Execution & Constant Mentorship

Interactive Scheduling

Building schedules via an intelligent 7-step wizard that accounts for morning routines and focus cycles.

Context-Aware Chat

24/7 AI Study Coach

Engineered for Deep Work & Accessibility

Focus Environment: Built-in session tracking, streak counters, and curated audio profiles to lock students into deep work.

Zero Barriers: Instant regional language accessibility ensures the platform scales to all students. Completely free, no login required.

Enterprise-Grade Architecture

A fully responsive, highly modular, and lightning-fast architecture. Built and deployed entirely on high-performance, zero-cost cloud infrastructure. A production-ready technical achievement by first-year engineering students.

Layer 1: Frontend (The Interface)
React.js, TypeScript, Vite, Tailwind CSS

Layer 2: Intelligence (The Brain)
Python, Flask, Scikit-learn, Google Gemini API

Layer 3: Data & Logic (The Engine)
Node.js, Express, GitHub for CI/CD

render

The Horizon

LighthouseAI is highly accurate, actively utilized by peers, and completely free. But this is just Version 1.0. The future of academic performance is connected, gamified, and institutional. The beacon has just been lit.
